Website and App Development

- Development under way to create an integrated website and app that allows SLF partners to access a transparent dashboard approach to conformance and compliance.

- Partners will have a dedicated Profile Page to host their partner links / information.

- Ongoing capability to enable inter-operability with other electronic systems and upload from manual data.

- Development will continue in parallel with the audit standard piloting and ultimately the audit will be recorded online to automatically populate databases within the website which will enable accurate, meaningful data capture for industry norms and harmonisation.
